

EXPEDITE SITE SELECTION FOR RENEWABLE ENERGY PROJECTS

Pivvot transforms the frustrating manual process of gathering and verifying site data into a streamlined digital experience. Instead of combing through disparate data sources for parcel, environmental, wetland, and geotechnical data, users can upload their own assets or access curated data layers through an interactive, cloud-based map.

With Pivvot, renewable developers and engineering firms can identify and evaluate rural wind, solar and battery storage sites in minutes instead of days.

VISUALIZE DATA IN SECONDS

- Set project criteria to identify sites by acreage and proximity to existing infrastructure.
- Download reports to view environmental, wetland, floodplain and slope data.
- Identify adjacent and nearby parcels with Pivvot's enhanced parcel data.

The screenshot displays the Pivvot Siting application interface. On the left, a sidebar contains a 'Siting Criteria' panel with various filters and a 'Find parcels' button. A red arrow points to the 'Usable Area Criteria' dropdown menu. The main area shows a satellite map of a region in Pennsylvania, with search results overlaid. A table at the bottom lists the results, including owner names, counties, and parcel sizes.

Owner Name	County	Size (ac)
MASONIC HOMES	Lancaster, Pennsylvania	1112.45
PPL BRUNNER ISL...	York, Pennsylvania	714.24
SUSQUEHANNA A...	Dauphin, Pennsylvania	648.86
REXROTH LIMITED ...	York, Pennsylvania	544.31
KREIDER NOAH W ...	Dauphin, Pennsylvania	465.55

UNDERSTAND USABLE ACREAGE WITH EASE

- Set renewable-specific constraints to calculate usable area in seconds.
- Visualize setbacks, critical species habitat, floodplains, infrastructure, and hundreds of datasets.
- Compare sites side-by-side to identify and rank your top options.

AVOID PROJECT ROADBLOCKS

- Utilize high-resolution slope, hydric soils, and other data to get a deeper understanding of potential issues.
- Identify adjacent and nearby parcels owned by the same landowner to identify access roads and alternative locations.
- Export landowner contact lists to expedite landowner outreach and negotiations.

PIVVOT DATA & REPORTING

SAVE TIME & MONEY ON FIELD INSPECTIONS

- Avoid sending crews out to bad sites with data-driven, accurate suitability assessments.
- Download detailed data packages and import into micro-siting and planning software to evaluate plans against usable area.
- Understand land ownership conflict, environmental, and geotechnical constraints earlier in the development cycle.
